

TO CONVERT A DURAFIRM 1 METER STAND TO A “SHORT STAND”

If you have a Durafirm 1 Meter Stand and want to change it to a “Short Stand”, the following items are needed:

One (1) SB550E Short Stand Anchor Fitting Assembly with hinges

One (1) SB404R and / or One (1) SB 404L Rail Bracket (for short stand)

Six (6) Bronze Anchors for installing “Short Stand” to cement pedestal.

If your existing 1 Meter Stand has guard rails, the following conditions apply:

If your current 1 Meter Stand has double guard rails on both sides, you CAN use the straight rails of the double guard rail assembly on your “Short Stand”, but you CANNOT use the bent rails because they will not fit the “Short Stand.” You will therefore need to order Two (2) C104 and YOU MUST SPECIFY “OLD RAILS” if your current Durafirm 1 Meter Stand was purchased BEFORE July, 2002 or specify “NEW RAILS” if your Durafirm 1 Meter Stand was purchased AFTER July, 2002.

If your current 1 Meter Stand has single guardrails on both sides or a single guardrail on one side, neither of these guardrails will work. Depending on which guard rail configuration you plan to have, you will need to order one or two C104 Bent Rails and one or two C106 Straight Rails. Remember, you will need to specify “OLD” or “NEW” guard rails based on the information in the paragraph above.

In addition, you may need to order a guardrail attachment package including C206 bronze rail brackets, C207 Stainless Steel Rail Clamps, SF117, SF118, SF119 Stainless Steel Guard Rail Clamp Bolts and C107 Guard Rail Plugs.
